

10 Ways Control Systems Lie

An Introduction to Instrumentation and Control

Alistair Marshall

IChemE

Scottish Members Group

www.thatscottishengineer.co.uk

What Will Be Covered

Simple Instrumentation

Process → Instrument → DCS

What Will NOT Be Covered

Analysers

pH, Density,

Gas Chromatography etc

Detailed electronics

Control loop design/APC

Temperature Indication

Temperature

RTD

No Calibration Required

“They either read
correct or don’t read at all”

– *Anonymous Instrument tech*

Temperature

RTD

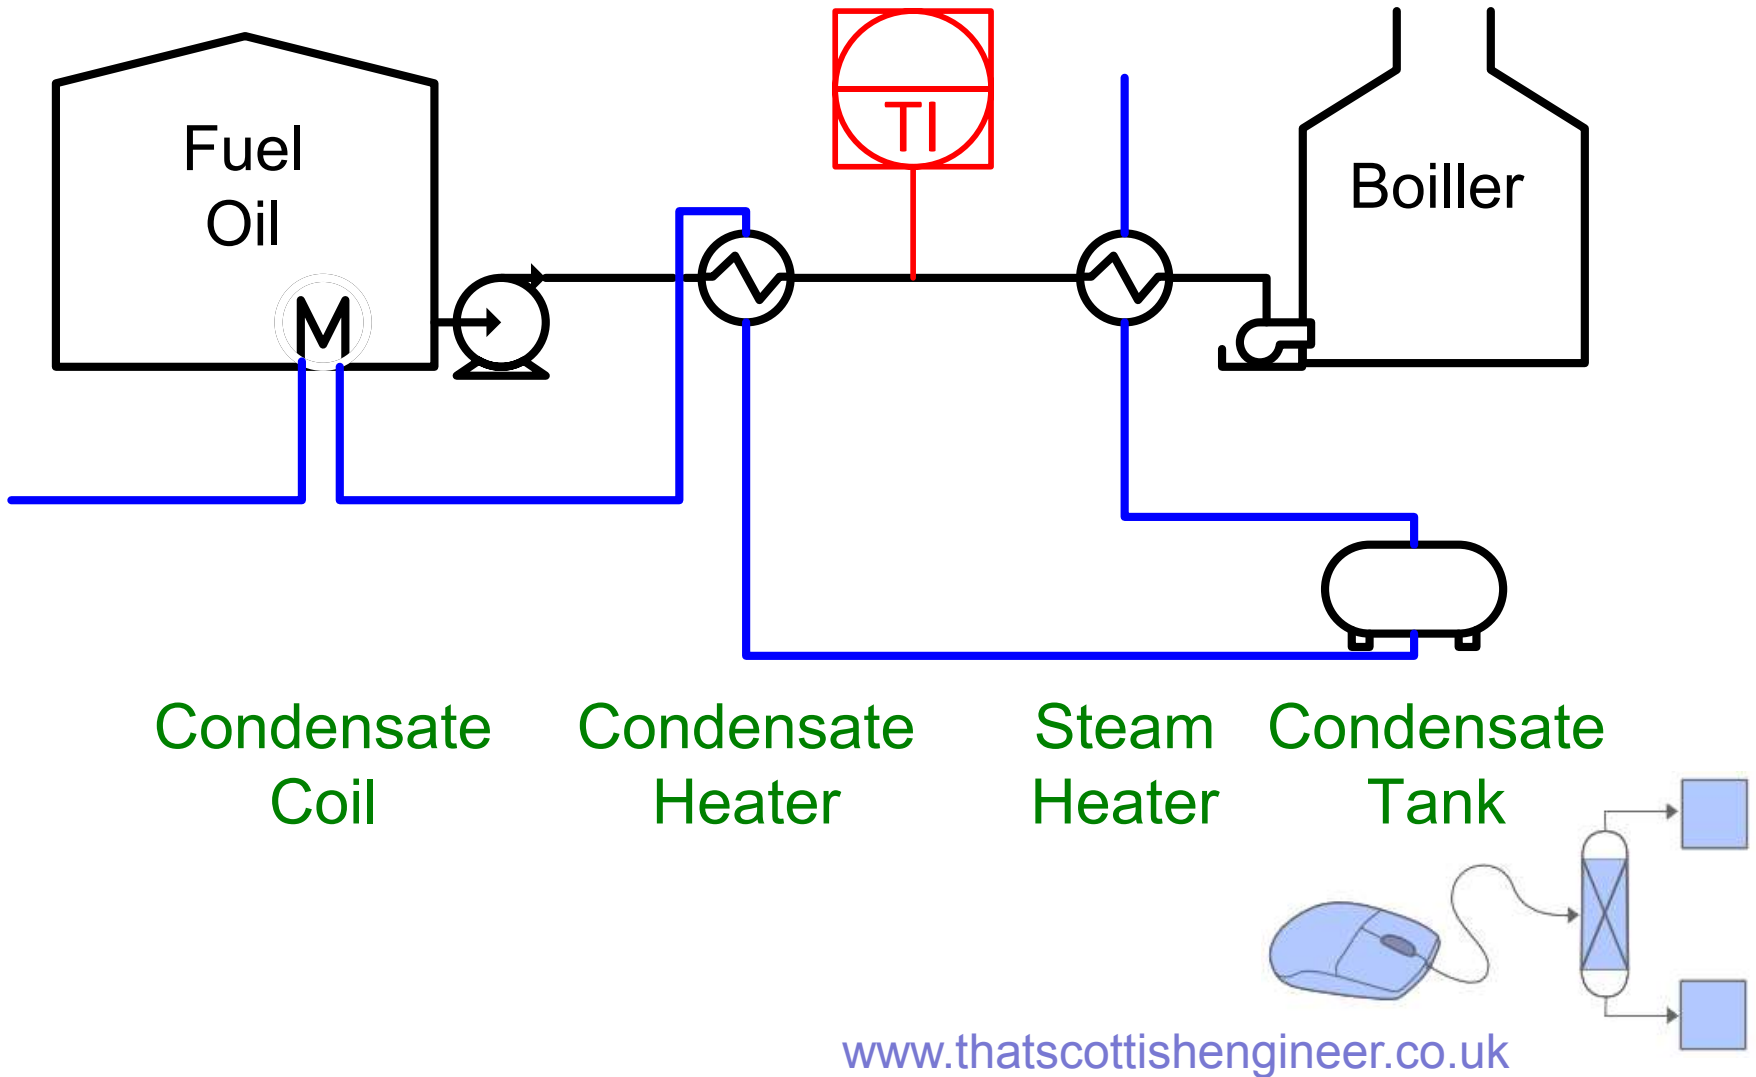

Delicate Instrument
Need Online
Replacement

Thermowell offers protection

Lie 1: HFO Import

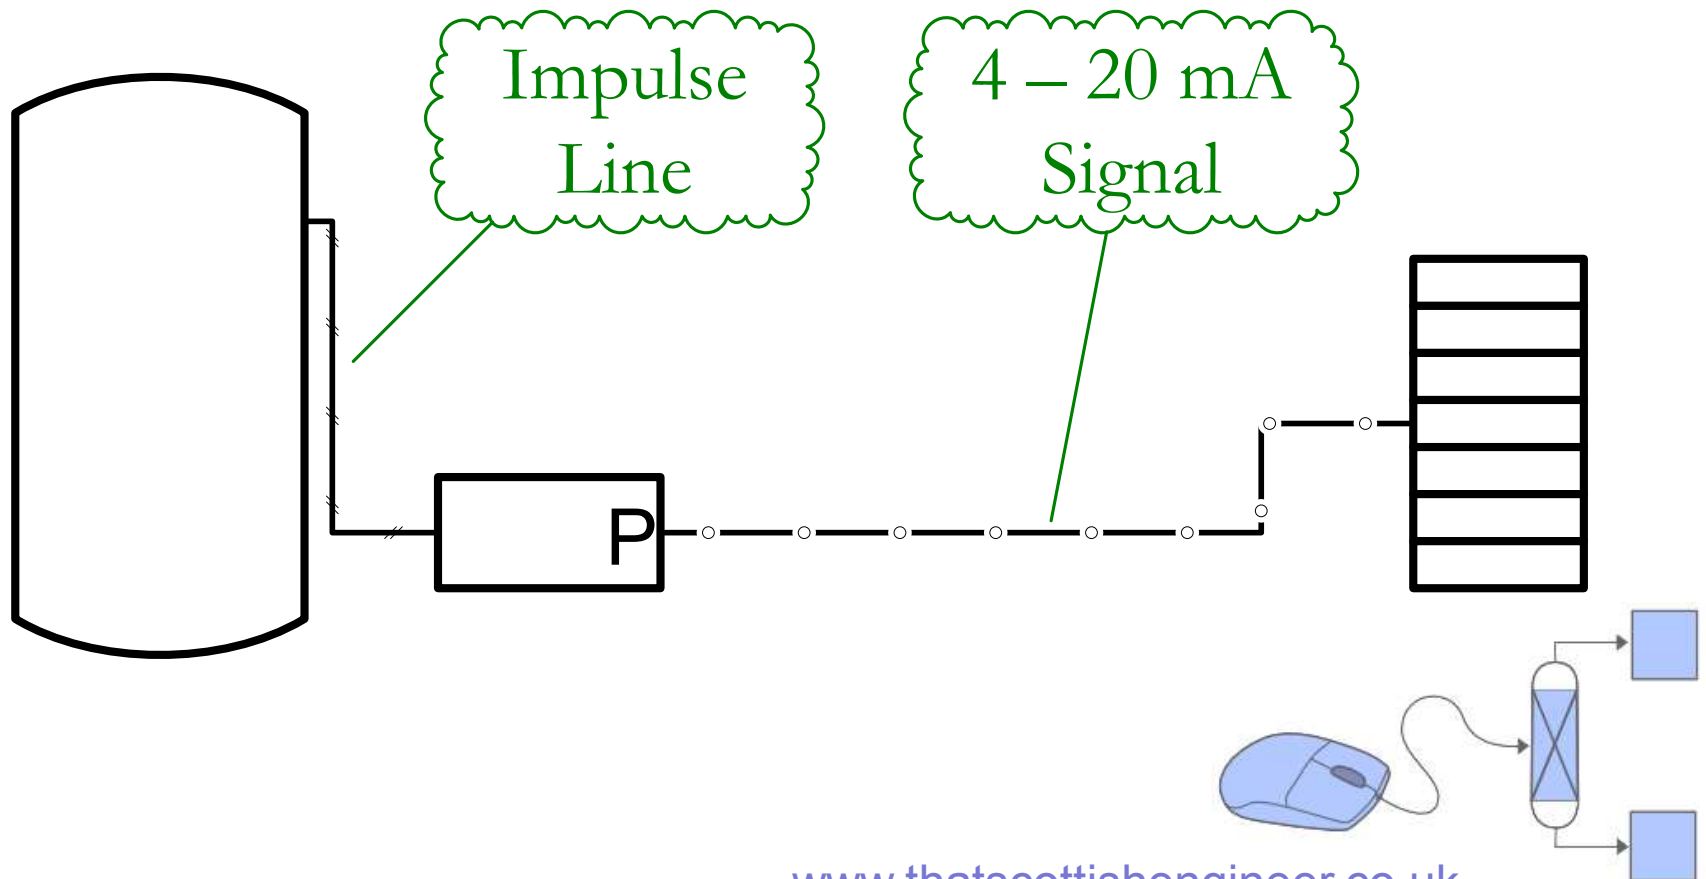

Pressure Indication

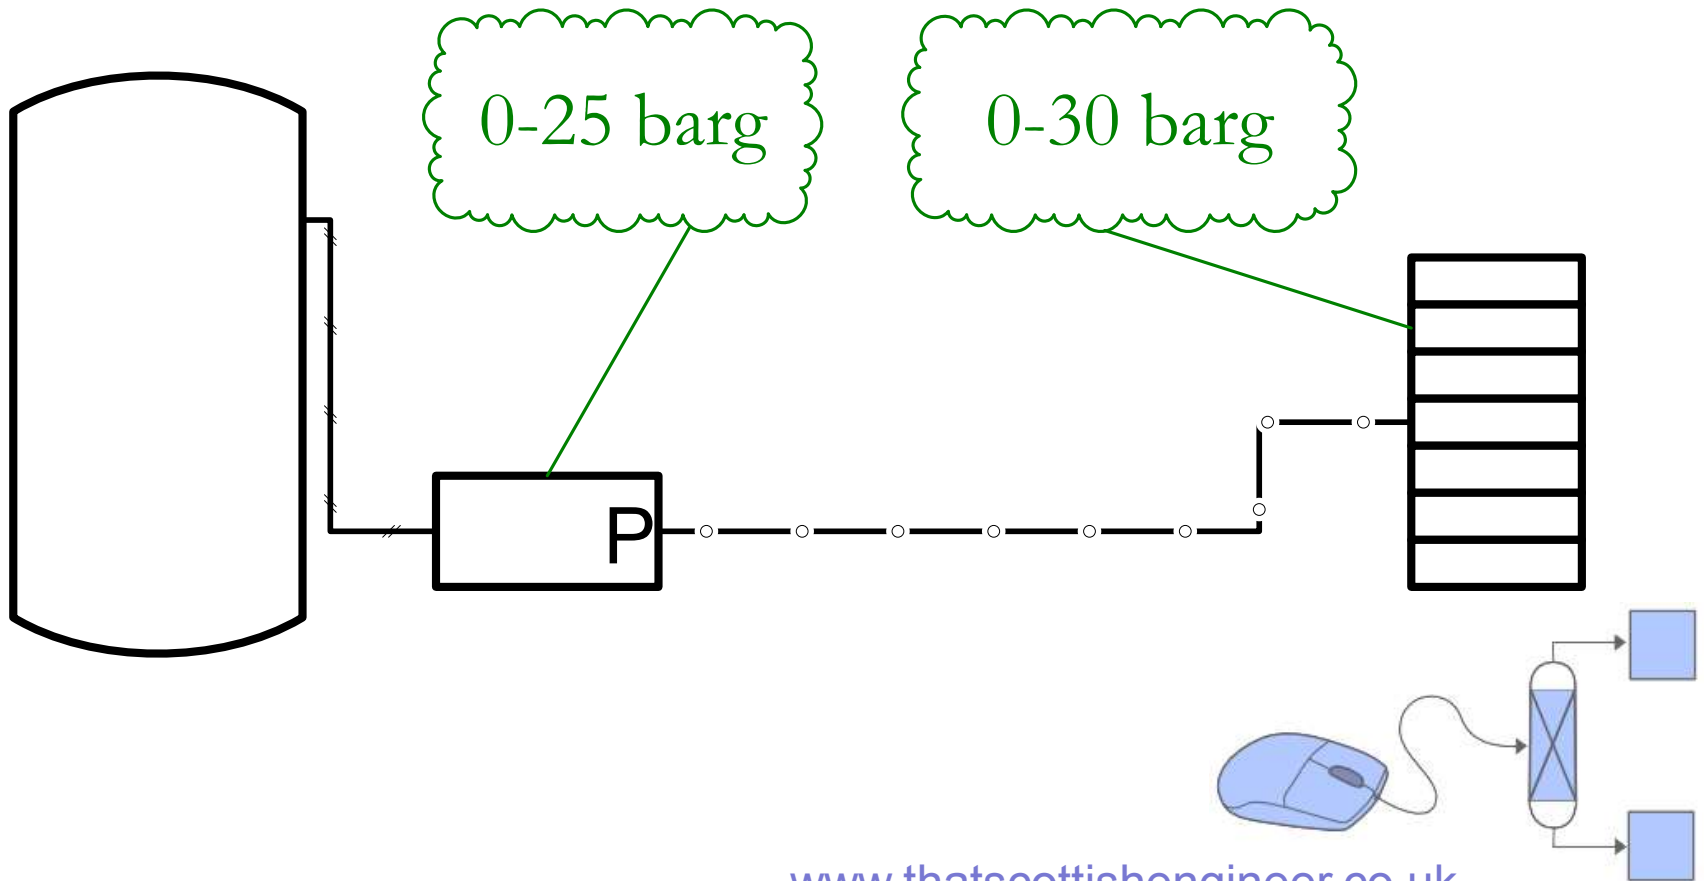

Pressure

How is condition transmitted to Control Room

Lie 2: New Transmitter

What happens when the ranges don't match?

Level Indication

Level

How hard is it to tell how much is in a tank?

Level: Delta Pressure

Pressure = Density × Gravity × Liquid Height

Lie 3: Startup/Shutdown

Sugar Factory

Sugar content
Norm: ~15%
Comm: <1%

Lie 3: Startup/Shutdown

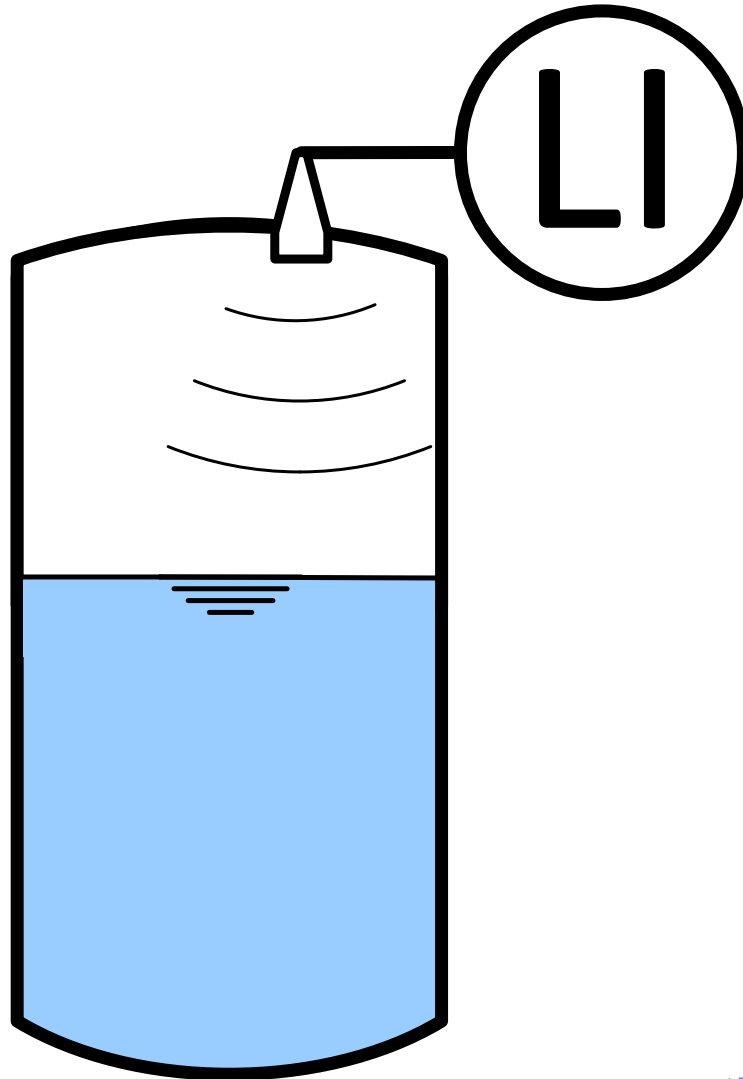

Sugar Factory

Does the density change at startup or shutdown?

Level: Radar

Density
Independent

Lie 4: Foam!

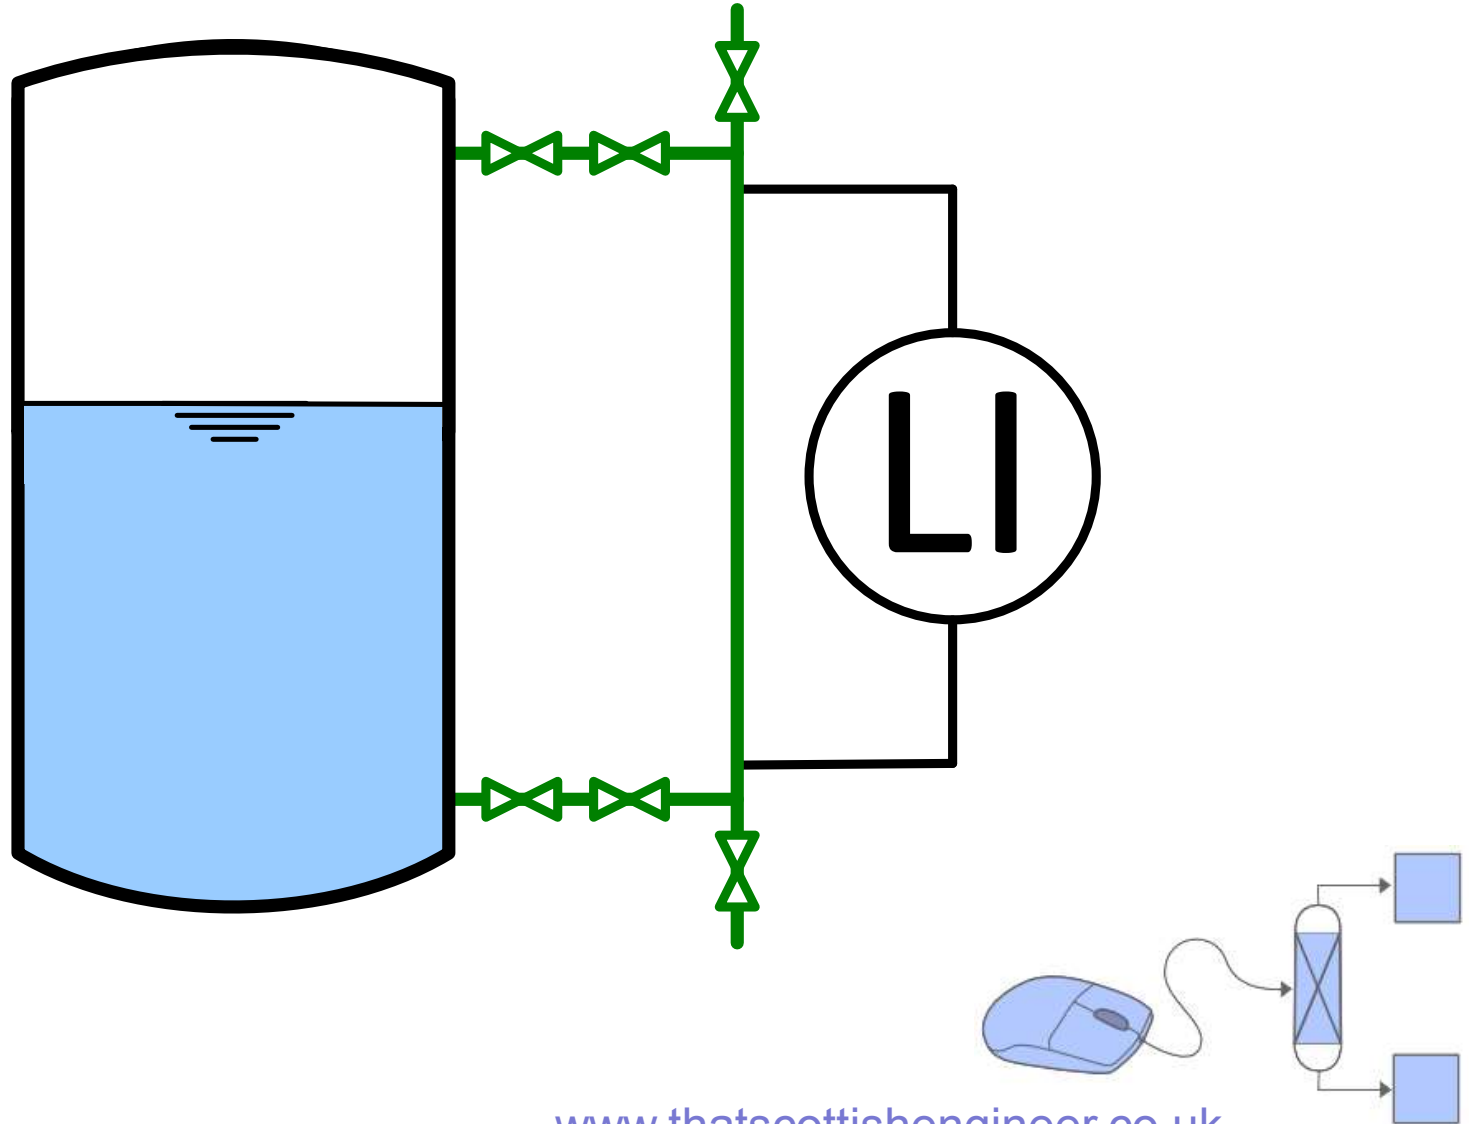

What would happen?

Level decreased
Empties vessel
Gas Breakthrough

Level Bridals

Lie 5: Blockage

Flow Indication

Flow: Orifice Plate

$$Q = CA_2 \sqrt{2\Delta P / \rho}$$

Lie 6: Square Rooting

$$Q = CA_2 \sqrt{2\Delta P / \rho}$$

Flow: Vortex

Lie 7: Low Flow

Low Flow → Dropped signal

Flow: Coriolis

<https://commons.wikimedia.org/w/index.php?curid=7978257>

www.thatscottishengineer.co.uk

Flow - Others

Ultrasonic

Magflow

Summary

What Have We Covered

Simple Instrumentation

Process → Instrument → DCS

What Will Be Covered

Simple Control

Process ← *Valve* ← DCS

Lie 8: Valve Position

DCS Output \neq Valve Position

Lie 9: Valve Fail Direction

Fail Open

20mA = Fully Closed

4mA = Fully Open

Lie 10: Condenser Bank

Lie 10: Condenser Bank
